

# Using Multidimensional Skylines for Regret Minimization

Alami Karim Maabout Sofian

June 23<sup>rd</sup> 2020

#### Context

- Investigate Top-K frequent and Top-K priority skylines as <u>candidate</u> sets for regret minimization queries<sup>1</sup>
- Experiment the speedup provided by NSC(Negative Skycube)<sup>2</sup> to regret minimization queries

<sup>[1]</sup> D. Nanongkai, A. D. Sarma, A. Lall, R. J. Lipton, and J. Xu. Regret-minimizing representative databases. Proceedings of the VLDB Endowment, 3(1-2):1114–1124, 2010. #### Preference queries Regret minimization query Mulitidemensional Skylines

# Preference queries

Given a set of tuples T, it returns a subset of tuples that suits the user preference

- Top-K query: based on scoring function
- Skyline query: based on dominance

Hotel	Price	Distance
h <sub>1</sub>	75	100
h <sub>2</sub>	45	150
h <sub>3</sub>	50	300
h <sub>4</sub>	65	450
h <sub>5</sub>	25	500
h <sub>6</sub>	50	400
h <sub>7</sub>	100	150
h <sub>8</sub>	30	300

E.g

• Skyline query result:  $h_1$ ,  $h_2$ ,  $h_5$  and  $h_8$ 

• Top-2 query result: Scoring function f(t) = P + D $h_1, h_2$ 

# Regret minimization query

Limitations

- Top-K query: requires to define a scoring function
- Skyline query: the size of the output is not controlled

Regret minimization query<sup>1</sup>: bounds the output without requiring a scoring function

We consider *L* the family of linear scoring function

Let  $f \in L$ ,  $f_1(T)$  the highest score

• Given  $S \subset T$  the maximum regret ratio,  $mrr(S, L) = max_{f \in L} \frac{f_1(T) - f_1(S)}{f_1(T)}$ 

Problem RMS: Given a dataset T, the family of linear function L, an integer r, compute a set  $S \subset T$  of size r that minimizes the maximum regret ratio mrr(S, L)

The regret represents how much users are statisfied with S.

Preference queries Regret minimization query Mulitidemensional Skylines

#### Regret minimization query

RMS is NP Hard<sup>1</sup>

*sphere*<sup>2</sup> is the state of the art heuristic algorithm with guarantees

Skyline points as candidates

Let Sky be the skyline set of T. Let  $S^*$  be the optimal solution of an RMS instance such that  $r \leq |Sky|$ , then  $S^* \subseteq Sky$ 

Preference queries Regret minimization query Mulitidemensional Skylines

# Mulitidemensional Skylines

Skyline set may be of the size of the whole dataset

We investigate Top-K Frequent skylines and Top-K priority skyline as candidate sets<sup>1</sup>

Top-K Frequent (Top-KF)	Top-K Priority (Top-KP)
Frequency: the number of subspaces <sup>2</sup> where a tuple is in the skyline	Priority: the cardinality of the smallest subspace where a tuple is in the skyline

<sup>[1]</sup> We compute Top-KF and Top-KP with index structure NSC

<sup>[2]</sup> Subspace: subset of dimensions

Speedup with skyline candidate set Speedup with Top-KF and Top-KP Regret ratio with Top-KF and Top-KP Regret ratio of *sphere* vs Top-KF vs Top-KF

#### Speedup with skyline candidate set

60

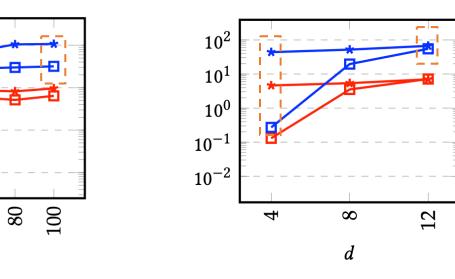

r

Time in sec.

r: size of the output by sphere

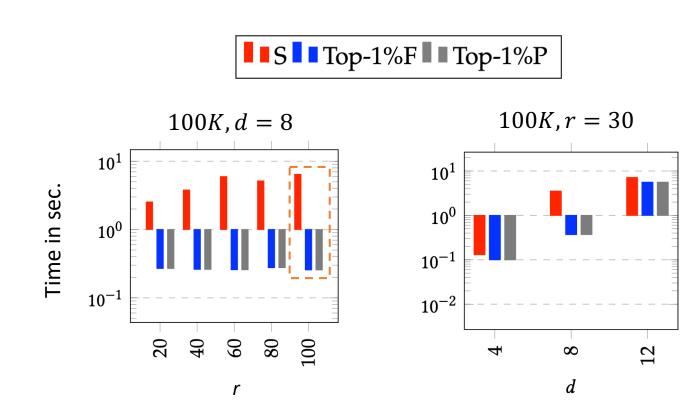

d: number of dimensions

D: dataset

S: Skyline set

Speedup with skyline candidate set Speedup with Top-KF and Top-KP Regret ratio with Top-KF and Top-KP Regret ratio of *sphere* vs Top-KF vs Top-KP

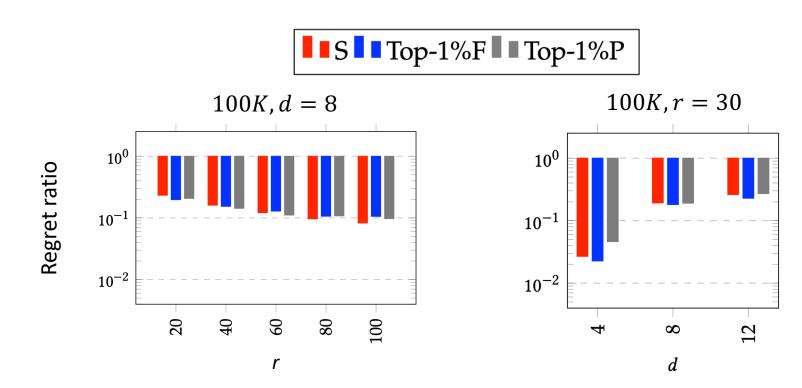

#### Speedup with Top-KF and Top-KP

*r: size of the output by sphere d: number of dimensions* 

Speedup with skyline candidate set Speedup with Top-KF and Top-KP Regret ratio with Top-KF and Top-KP Regret ratio of *sphere* vs Too-KF vs Too-KP

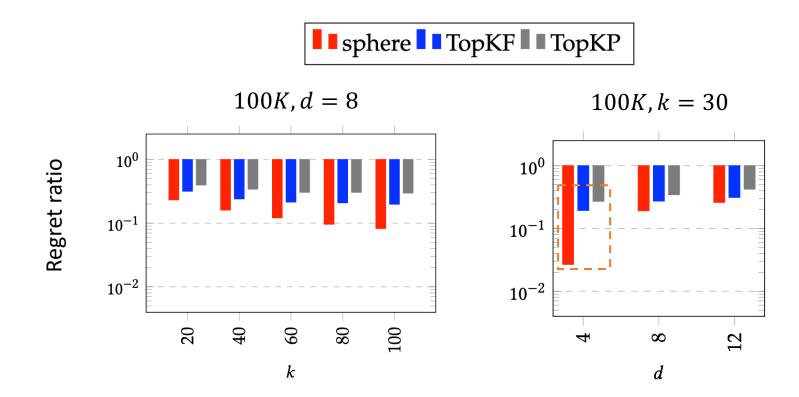

#### Regret ratio with Top-KF and Top-KP

*r: size of the output by sphere d: number of dimensions* 

Speedup with skyline candidate set Speedup with Top-KF and Top-KP Regret ratio with Top-KF and Top-KP Regret ratio of *sphere* vs Top-KF vs Top-KP

#### Regret ratio of *sphere* vs Top-KF vs Top-KP

*k: size of the output by sphere, TopKF , and TopKP d: number of dimensions* 

### **Conclusion and Perspectives**

## Conclusion:

- Top-KF computes a good candidate set for *sphere*
- NSC speedup *sphere* by optimizing the computation of candidate sets

#### Perspective:

• A theoretical guarantee on the regret ratio by using the candidate sets Top-KF and Top-KP
